Fax: +256-414-257869/25637

Foreword

I am pleased to present you the Uganda Child Helpline Annual Report 2017/18 that provides statistics on various forms of Violence Against Children (VAC). The report goes ahead to give details of the achievements, challenges and recommendations that are expected to improve the situation of the children subjected to abuse. Uganda Child Helpline (UCHL) service which is a voice for countless children affected by violence across the country may be accessed via the link www.uchl.mglsd.go.ug.

This annual report is a series of other reports that have always been produced by MGLSD with support from UNICEF. The previous annual reports had data presented mainly in tabular form. Currently, there is increased attention towards adding a narrative to the tables and also presenting the data using graphical user friendly presentations. There is also increased interest by the Government, development partners, civil society and international organizations to utilize this report for programming interventions that are geared towards reducing VAC in the country.

This annual report is therefore another milestone in the Government's commitment to make data on VAC available, to enable Government and development partners improve the quality of life of the vulnerable and marginalized groups of children in the country, and protect them from continued child abuse. I urge all the stakeholders dealing with children to continue supporting Government's efforts towards protecting the rights of our children in Uganda.

Pius Bigirimana

Permanent Secretary

Acknowledgement

The Ministry of Gender, Labour and Social Development (MGLSD) is dedicated to the production and dissemination of the Child Helpline Report in order to guide planning and decision making at various levels. The use of data for decision making at various levels of governance in Uganda has increased, therefore this report is essential for evidence-based policy formulation and implementation, so as to curb VAC in Uganda.

It therefore is my expectation that as you read this report, you will find it both informative and motivating. In addition, it will give you greater insight into the work undertaken by the Statistics Unit of MGLSD to fight for the rights of our children by compiling, analyzing and disseminating this detailed report on VAC.

The process of developing this statistical analysis report was highly participatory and consultative. I would like to extend gratitude to all stakeholders who made the development of this report a success. These key stakeholders include United Nations Children's Fund (UNICEF), Plan International, Save the Children Uganda and World Vision Uganda. The support they have provided at the district levels has enabled district action centers to be responsive to cases reported to them through the UCHL system. Further gratitude is extended to the partners on the ground; the para social workers, the Child Protection Committees (CPCs), Local Council (LC) 1 offices, the Child and Family Protection Unit/Officer (CFPU/O), the Community Development Officers (CDOs), the District Probation and Social Welfare Officers (DPSWOs) and various Civil Society Organizations (CSOs) whose quick action brought relief to many previously abused children.

Special thanks to UNICEF, our development partner, for their valuable contribution to the development of the Child Helpline and this report. To everyone who played a role and contributed to the formulation of this report, I thank you and look forward to the usage of the report to guide in the sustainable action towards progressive elimination of violence against children.

As the Ministry of Gender, Labour and Social Development (MGLSD), prioritization and allocation of resources towards child protection is an urgent obligation. We will continue to lobby for financial resources from Government and development partners, to sustain the Child Helpline activities.

Executive Summary

The Ministry of Gender, Labour and Social Development is an institution that is responsible for the protection and care of children under institutional care. As we come to the end of this year of transforming the lives of children in need in Uganda; there is need to have quality statistics that will inform future planning for children living in poverty, deprivation, exploitation, exclusion and vulnerability, which can cause life-long irreversible effects in their lives even after they transit into adulthood.

This report is therefore expected to provide information that will guide decision making, policy formulation and planning in the financial year 2019/20. Over the review period, the analysis reveals that the total number of calls made were 234,069 of which 8.4 % were by females, 16% by males and 75.6 % unknown. The unknown callers were those who did not reveal their sex. With regard to case management; cases closed were 231,502 (98.9%), incomplete were 89 (0.04%) and ongoing were 2,478 (1.06%).

The leading language used in reporting cases was Luganda with 9.7% calls followed by English and Runyankore with 7.8% and 1.6% calls respectively. Majority of the cases 5.2% were reported by the community followed by family members with 1.5%.

The child abuse cases reported on included: child exploitation, child neglect, child trafficking, emotional abuse, murder, online child abuse, physical abuse, and sexual abuse. Of these child abuse cases, child neglect took the lead with 1,791 cases (51.6% males, 45.3 % females and 3.1% unknown). This was followed by sexual abuse with 753 cases (96.4% females, 1.3% males and 2.3% unknown).

The type of services offered to the clients included, legal support services, and provision of information, psychosocial support services and others.

In generating this Report, the statistical team observed that most calls were captured as unknown (others) and yet these could be useful data points that would enrich the data base. The team therefore recommends that the call center managers should always endeavor as much as possible to make repeated follow up phone calls to get the missing information from the clients. Case Management System should be linked to the National Gender Based Violence Data base (NGBVD) and the Orphans and other Vulnerable Children Management Information System (OVCMIS) to avoid cases of double counting related to children statistics.

List of Acronyms

CDOs	Community Development Officers
CFPU/O	Child and Family Protection Unit/Officer
CPCs	Child Protection Committees

1.0 CHAPTER ONE:

1.1 Introduction and Background

In 2014, the Ministry of Gender Labour and Social Development in partnership UNICEF and other stakeholders established the Toll Free Number 116 as the Uganda Child Helpline also known by its brand name “Sauti”, to encourage children and adults to report cases of child abuse and all forms of child rights violations. The UCHL service is one of the mechanisms to strengthen child protection in the country as a Government of Uganda led service. UCHL links children at risk, in need of care, and support & protection, to various services through case management reporting pathways. The brand Sauti emphasizes the importance of strengthening and safe guarding voices of children especially the most vulnerable and marginalized who are often unheard and denied protection and care.

The Uganda Child Helpline, offers a toll-free telephone service on the short code 116 which is accessible on all telecommunication networks in the country. The telephone service operates 24 hours a day, seven days a week, and is just one of the ways in which the Child Helpline aims to protect children. Other approaches employed by the Helpline to offer child protection include: handling walk-in clients’ cases; responding to cases reported through the U-report platform; follow up of child abuse cases reported through various media (including social media); handling cases that entail online child sexual abuse; and community awareness raising campaigns in schools, communities and on radio & television, etc.

About 55% of Uganda’s population are children (below 18 years of age) of whom are orphans. This entire population of children needs to be protected so that they can enjoy their rights and achieve their full potential, dreams and aspirations.

1.2 Situational Analysis

1.2.1 Global situation of Child Abuse

Child abuse or child maltreatment is physical, sexual, or psychological maltreatment or neglect of a child or children, especially by a parent, caregiver or any person who is involved in committing an act that violates the rights of a child. Child abuse may include any act or failure to act by a parent or other caregiver that results in actual or potential harm to a child, and can occur in a child's home, or in the organizations, schools or communities the child interacts with. The terms child abuse and child maltreatment are often used interchangeably.

Child abuse is a worldwide concern that is affecting all countries regardless of their levels of development and the magnitude of child abuse varies from one country to another depending on the effectiveness of the child protection services within the countries. Globally there are eleven countries with pronounced child abuse. The highest registered rate of child abuse in the world is in Australia where it is estimated that close to 50,000 cases of child abuse are reported in each year. In the United States of America, 1 out of 5 teenagers are reported to have faced some kind of abuse either in school or at home. USA deals with almost 20,000 such cases annually. Russia which is ranked fifth globally has to deal with around 10,000 to 11,000 child abuse cases each year. In the United Kingdom, One in every 200 adults is reported to be a pedophile. In England alone more than 16,000 cases of child abuse, neglect and assault are usually recorded annually. (Sunday Mirror, 2018)

In Asian countries, Afghanistan is one of the countries with the highest number of cases of child abuse registered annually. The political unrest and scarcity of basic necessities play a big role in child abuse and rape cases. Annually, more than 18,000 of new child abuse cases emerge in Afghanistan. Others include India and Pakistan. From 2001 to 2011, India saw a considerable rise in child abuse cases from 2,000 to around 7,500 in 2011. Like India, Pakistan has a considerable child labor challenge along with assault and rape. More than 2,500 cases of child abuse including sexual assault are reported each year (Times Media, 2007)

1.2.2 The Situation in Sub Saharan Africa

In Africa, Zimbabwe leads the pack among the 11 Countries with the highest rates of child abuse in the world. It is estimated that in Harare alone, more than 30,000 cases of child abuse and rape have been officially recorded during the past 4 years. (The Herald, 2010). Botswana is infamous for having some of the worst healthcare facilities in the world and child abuse prevalence. It is estimated that around 10,000 cases of child abuse are reported annually. South Africa too, features with a high incidence of child abuse; according Helping Hand, (2015) more than 3,000 cases of child rape and assault are reported annually.

1.2.3 The Situation in Uganda

Uganda has many cases of Violence Against Children (VAC) that are wide spread in many aspects. VAC happens in homes, communities, schools, on roads, on the internet, on phone and other avenues. VAC cases are usually reported to the Police, District Probation Officers, LC officials, religious leaders, and others. In addition to these avenues for reporting the VAC cases, the Ugandan Government with the help of development partners has developed the National Gender Based Violence Database (NGBVD) where cases of Gender Based Violence (GBV) are reported via the system.

The primary, fully-functional case management system developed with the support of UNICEF is the Uganda Child helpline which is a useful tool in reporting cases of Violence against Children without fear of retribution. In 2016, the helpline registered 238,629 calls of which 2,878 were often life-threatening. An additional 373 cases were received through the media and walk-in clients.

Another indirect form of violence registered against children is child marriage resulting into teenage pregnancies. Out of 1.2 million pregnancies recorded in Uganda annually, 25 per cent are teenage pregnancies. This means that more than 300,000 teenagers who get pregnant also account for the bulk of unwanted pregnancies, which often end up in unwanted births or abortion. (Population Secretariat, 2013)

Regionally, teenage pregnancy rates are consistently high. According to the National Strategy to End Child Marriage and Teenage Pregnancy (2015/16), the rates are highest in Northern Uganda (59%), followed by Western (58%), Eastern (52%), East Central (52%), West Nile (50%) and Central (41%).

Statistical findings in the NGBVD 2017 revealed that from January 2013 to July 2017 more than 414 child marriages were registered and of these 96.9% were female and 13.1% were male. The database also revealed 802 cases of forced marriages 96.9% of which were of females. A close look at the ages of these victims clearly reflects that most were below the age of 18 years and therefore should have been reported as defilement cases other than forced marriages. This gross child abuse which often is disguised under the cover of child marriages needs to be unearthed and the perpetrators brought to book accordingly.

The database further reveals that child marriage is highest in Northern Uganda at 59.7 %, followed by South Western region 10.4%, Eastern 6.04%, Central 5.3%, Karamoja 4%, Western 2.7%, Busoga 1.93% and West Nile region 0.24%.

Conclusively, prioritized action, dedicated resource allocation and investment in child protection are urgent imperatives that a country needs to plan for if children are to be saved.

2.0 CHAPTER TWO:

2.1 Methodology

Quantitative data analysis techniques were mainly deployed to analyze and present statistics in a format that can be easily understood and utilized for planning and decision making. Data was accessed/extracted from the data base of the Uganda Child Helpline system over the period July 2017 to June 2018. The data was then subjected to a thorough cleaning and editing process before actual analysis.

Data analysis was done using excel and STATA. Analysis tables were drawn up and appropriate statistical graphs drawn accordingly.

The statistics team systematically conducted data analysis through two categories; analysis of calls and analysis of case management.

Under analysis of calls, the following variables were analyzed:

- Languages used in reporting
- Categories of calls by sex
- Sources of information
- Analysis of child abuse cases reported by sex
- Category of information inquiry

Analysis of case management involved:

- Perpetrator marital status
- Perpetrator relationship to victims
- Victim's perceptions of health status
- Child caregivers
- Category of counselling services by sex.

The Analysis team also conducted comprehensive literature review by looking at VAC and child abuse cases against children at global, sub-saharan Africa and then Ugandan level for comparison purposes.

Finally, consultations were also made with call center managers at Kireka UCHL headquarters in a bid to breakdown and establish the meaning of 'unknowns' that are common in the analysis tables.

3.0 CHAPTER THREE:

This chapter explains how the statistical team conducted the data analysis by categorizing it into two components i.e; analysis of cases and the analysis of case management.

3.1 Analysis of Calls

Under analysis of calls, the following were considered;

3.1.1 Callers by Sex

In order for child abuse cases to be reported through UCHL, calls have to be made to the helpline. The table below indicates that out of 57,054 callers, 65.7% were males while 34.3% were females. This implies that more men contacted the helpline compared to their female counterparts.

Table 1: Callers by Sex

Sex	Frequency	Percentage (%)
Female	19,580	34.3
Male	37,474	65.7
Grand Total	57,054	100.0

Source: UCHL Case Management System

3.1.2 Languages Used in Reporting the Cases against Affected Children

The calls that were made through the Uganda Child Helpline were in various languages. Information from the table indicates that the leading language used for reporting was Luganda with 22,722 cases, followed by English and Runyankore with 18,292 and 3,783 respectively. The least language used was Lusomya while the rest of the languages were averagely used. Blank calls, silent calls and line testing calls contributed to the unknown calls.

Table 2: Languages Used in Reporting

Caller Language	Frequency
Acholi	127
Alur	40
Ateso	119
English	18,292

Runyoro	293
Rutooro	708
Unknown	185,422
Grand Total	234,069

Source: UCHL Case Management System

3.1.3 Source of the Information

The category of callers who provided information through the helpline constituted of various groups of people. The majority (12,097) of the cases were reported by community members followed by family members with 3,491 cases. This portrays that the community has got knowledge of UCHL and its services.

The CDOs, crime preventers, helpline, GISOs, family, students, walk in clients, para social workers, probation officers and others reported one to two cases each. 217,888 cases were from unknown sources (silent, prank, line testing and incomplete calls, wrong numbers among others).

Table 3: Source of Information

Source of information	Frequency
CDOs	1
Community	12,097

Probation Officers	3
School administration	142
Students	1
Walk-in Clients	2
Unknown	217,888
Grand Total	234,069

Source: UCHL Case Management System

3.1.4 Main Category of Calls by Sex

Out of the total number of 234,069 call, 2.5% were by males, 2.1% by female callers and 95.4% Unknown. This was mainly due to the fact that some calls were prank calls, blank calls and silent calls, etc and these were mainly other calls. Majority of the callers (13,092) sought information about the helpline, followed by those who wanted counselling and 57 callers were reporting abuse cases. It should further be noted that, although more calls were generally made by the males, more females made calls in regards to reporting abuse cases (1,837) and counselling (504). This is due to the fact that more women know more about the services of the helpline compared to the males.

Table 4: Main Category of Calls by Sex

Case Main Category	Female	Male	Unknown	Grand Total
Abuse	1837	1224	57	3118
Counselling	506	433	96	1035

Grand Total	4991	5820	223,253	234,069

Source: UCHL Case Management System

3.1.5 Category of other Calls

Statistics from the UCHL indicate that a total of 216,746 calls were ‘Other’ calls. These calls constitute of the incomplete calls; Blank calls, Greetings, line testing, prank calls, request for specific counsellors, silent calls and wrong number. Majority of the other calls were made by clients whose sex was undisclosed (214,484). Among the clients who openly disclosed their sex, the males were more (1,434) than their female counterparts (828).

Among the calls received at the call center, silent calls took lead with 111,356 calls (51.4%), followed by blank calls (46,734, 21.6%). This clearly reflects that the greatest number of unknown callers did not disclose their sex.

Table 5: Categories of other calls received at UCHL by Sex

Case Category	Female	Male	Unknown	Grand Total
Incomplete call	554	858	37,291	38,703
Blank call	2	3	46,729	46,734

Grand Total	828	1434	214,484	216,746

Source: UCHL Case Management System

3.1.6 Categories of Information Inquiry cases, by Sex

Inquiry of various services offered by UCHL was made by a total of 13,092 callers. More males made inquiries about UCHL than the females. However, the majority of the callers who inquired or sought for information had their sex undisclosed.

47.2% of the callers inquired about helpline services and 26.6% callers inquired about other services. 0.01% of the total number of callers needed information about birth registration. Other children who were either neglected or orphaned and were in need of school fees also called and these comprised 37.7% females and 62.3% males.

It should be noted that 47.2% of the callers sought information on the Helpline services and of these women constituted 51.0%

Table 6: Information Inquiry, by Sex

3.2 Analysis of Child Abuse cases

3.2.1 Category of Child Abuse Cases, by Sex

The most common forms of child abuse cases that were reported through the Uganda Child helpline include: child exploitation; child neglect; child trafficking; emotional abuse; murder; online child sexual abuse and violence; physical abuse and; sexual abuse. Generally, females were more affected by abuse cases at 57.6 % compared to their male counterparts who comprised 38.2 %, while the unknown were 4.2 %. Of the child abuse cases, child neglect took the lead 57.4 % and while the child maintenance had the highest number of cases. Under that of Sexual abuse at 24.2% also ranked high among cases reported, under which defilement the most was cited. The least case of child abuse was online child sexual abuse and violence with 0.16% of the cases reported.

Table 7: Cases of Abuse, by Sex

3.3 Analysis of Case Management

Information on the various variables in regard to the Uganda Child Helpline was analyzed and assessed in order to determine the progress of reporting and case management of cases of children's rights violation. The findings are highlighted in the following paragraphs.

3.3.1 Perpetrator Marital Status

Statistics from the Uganda Child Helpline indicate the marital status of the perpetrators. During FY 2017/18, the highest number of perpetrators were married at 66.6%, followed by the single, 15.4% and the least number of perpetrators were the divorced at 0.6%.

Figure 1: Marital Status of Perpetrators

Source: UCHL Case Management System

3.3.2 Perpetrator Relationship with the Victim

The table below shows the relationship between the perpetrator and the Helpline caller, summarily indicating that most of the perpetrators were closely related to the clients. Fathers constituted 52.2% of the perpetrators of child abuse cases, followed by males who were not related to the client's 13.4% and mothers 10.3%. Singular attention should be paid to close relatives, who were revealed as the highest number of perpetrators.

Table 8: Perpetrator Relationship with the Callers/ Victims

3.3.3 Health Status of the Perpetrators

The UCHL captures information about the health of the perpetrator. Out of 697 perpetrators, 92.9% were healthy, 5.5% were HIV positive, 0.7% were mildly sick and 0.4% were drunk. Further analysis indicates that there more male perpetrators' health status revealed compared to their female counterparts.

Table 9: Perpetrators Health Status.

3.3.4 Status of Cases reported

The Status of the cases handled by the Uganda Child helpline cut across three dimensions. And these are namely; the closed cases, incomplete cases and the ongoing cases. Majority (231,502) of the cases that were handled by the Uganda Child helpline were completed and closed. These constituted of 98.90%. 2,478 cases were still ongoing and 89 cases were incomplete.

Figure 2: Status of Cases Reported

3.3.5 Services Offered to the Callers, by sex

In addition to receiving GBV cases, the helpline offers other services to clients. Such services include, basic needs support, legal support, provision of information and psychosocial support. Analysis shows that 29.4% males received more services from the helpline compared to 26.5% females and the majority of services were offered to clients whose sex was unknown at 44.2%. Callers who were provided with Information constituted of the highest percentage 61.9% and of these, females at 29.1% were more than the males 24.6%. Of the 3,203 callers who were given awareness, males 37.3% were more than their female counterparts 20.5%. 259 callers were offered psychosocial support. Of these callers, there were more females 42.1% who were offered psychosocial support than the males 35.9%. This points to the possibility that there were more males who did not have knowledge about the services of the Helpline before seeking awareness, compared to their female counter parts.

Table 10: Services Offered

Type of Services Offered	Female	Male	Unknown	Total
Awareness	656	1,195	1,352	3,203
Basic needs Support	1	0	0	1
Legal Support	2	0	0	2
Provision of Information	1,638	1,382	2,605	5,625
Psychosocial Support	109	93	57	259
Grand total	2,406	2,670	4,014	9,090

3.3.6 Categories of Counseling Services by Sex

Clients or victims are given different counselling services depending on the case category handled. Table 11 indicates that females at 48.9% had more counseling sessions compared to males 41.9% and the unknown were 9.3%

Among the child counselling cases, child custody (310) had the highest counselling case category followed by parent-child relations (117). The other cases of counselling included loss and grief, discrimination and self-esteem.

Table 11: Cases of Counselling, by Sex

Case Category	Female	Male	Unknown	Total
Addiction	1	3	1	5
Boy/Girl Relationship	8	6		14
Career Guidance	6	10	1	17

3.3.7 Child Care Givers

Out of the 3,517 care givers, majority 44.5% of them were single parents to the clients. 29.7% care givers were categorized as both parents, 11.6% caregivers were grandparents and 9.4% were guardians. It should be noted that 52 child headed households were noted among the care givers. Family friend, refugee, step father, street child, teacher and others were the least number of care givers.

Table 12: Child Care Givers

Household Head	Frequency

3.4 Key Findings

- i. Total number of callers by sex were 57,054. Out of which, 34.3 % were made by females, 65.7% by males.
- ii. The case status stood as follows:
 - Cases closed were 231,502 (98.9%)
 - Incomplete 89(0.04%)
 - Ongoing 2,478(1.06%)
- iii. The leading language used was Luganda with 22,722 calls followed by English (18,292) and Runyankole (3,783) calls. The least used language used was lusamya and the rest of the languages were averagely used.
- iv. The majority of the cases (12,097) were reported by community members followed by family members with 3,491 cases.
- v. Type of services offered. These included, legal support services, provision of information and psychosocial support services.
- vi. The Child abuse cases reported included: child exploitation, child neglect, child trafficking, emotional abuse, murder, online child sex and violence, physical abuse, and sex abuse. Of these, child neglect took lead with 1,791cases (51.6 % males, and 45.3% and 3.1 others.). This was followed by sexual abuse with 753 cases (726 females (96.4%) and 10 males (1.3%) and 17(2.3%) unknown.
- vii. The category of callers who provided information through UCHL comprised various groups and not only children. The majority (12,097) of cases were reported by community members, followed by family members (3,491).
- viii. From case management analysis, the highest number of perpetrators were married people (1,612) followed by those who were single (373).
- ix. Most of the perpetrators of the child abuse cases were closely related to the clients and fathers (2,144) constituted the highest number.
- x. Majority of the perpetrators of child abuse were reported to be healthy people (648)
- xi. The majority of the child care givers (1,564) were single parents. This is an indication that family breakdown could be on the increase with parents opting to live a single life as opposed to marriage.
- xii. Not all calls that were received at the call center were reports of child abuse cases. Other calls were meant for greetings, making inquiries, requests for specific counsellors, wrong numbers and others. It is therefore some of these calls that triangulate into big numbers of the variable called 'unknown' that is in reflected in some tables.

4.0 CHAPTER FOUR

4.1 Challenges

- a) Several cases of variable are captured as unknown and yet these could be useful data points that would enrich the analysis (missing information).
- b) There is need for staff who can speak more languages across the country to work as call center managers. Currently approximately 20 languages are spoken fluently by the counselors.
- c) Inadequate funding for the office of the District Probation and Social Welfare Officer which leads to delays in follow-up of referred cases.
- d) Difficulty of extracting details of the perpetrator of child abuse cases.

4.2 Recommendations

- a) Apart from the UCHL platform, children should be encouraged to report cases through schools and communities should also put in place mechanisms that would encourage children to report child abuse.
- b) Parents should be encouraged to join parent support groups for peer support in case of child abuse and also generate ideas to improve family livelihood in a sustainable manner
- c) Hold UCHL quarterly regional data review meetings with UCHL managers, counselors, victims and other stakeholders to review progress and development of the UCHL.
- d) Regularly produce annual report for UCHL and disseminate to various stakeholders.
- e) Refresher training for UCHL counselors and data mangers to enable them improve on their data management and client counselling skills.
- f) Pronounced cases of unknowns should be drastically reduced in the data base, as they may not be useful to the analysis. This cases of unknowns may even be dropped in the analysis since it was explained by the IT officer in charge of the Helpline that not calls received are reporting child abuse cases.
- g) The call center managers should as much as possible make follow-up calls to obtain the missing information from the callers to reduce on the several unknowns.
- h) Children who called and complained about lack of school fees (506) need to be followed up by the call center managers and given support & assistance by implementing partners.

Appendix 2: Glossary of Terms

Incomplete call	Refers to a call that breaks off before the caller completes giving the details of his/her call.
Blank call	This is when the recipient hears nothing due to network issues.
Greetings	Calls that are usually received by the call center managers but are meant only for greeting them and not for reporting VAC cases.
Line testing	Call usually made for purposes of finding out the functionality of the system.
Prank call	Calls meant for teasing, joking, tricking, a recipient of the call and are usually not seriously meant for genuine VAC cases.
Request for specific Counsellors	Calls made to specifically seek for counselling services.
Silent call	Refers to a situation where a caller calls and does not talk or respond to the recipient of the call due to certain reasons best known to him or her. Such calls are usually received and the recipient may hear what is going on.
Wrong Number	A call that is unintentionally made to a number that is dialed wrongly.
Child to Child Sex	Sexual Offence or encounter that takes place between individuals who are children.
Discrimination	This refers to the unjust or prejudicial treatment of different categories of people or things, especially on the grounds of race, sex and age.
Family Issues	Are issues that arise within a family and may be resolved amongst the members. For example, balancing work and home life, agreeing on parenting decisions, handling arguments, relationships, responsibilities, etc.

Juvenile Delinquency	Juvenile delinquency, also known as "juvenile offending", is participation in illegal behavior by minors (juveniles, i.e. individuals younger than the statutory age of majority- is the age at which children become adults by law). Most legal systems prescribe specific procedures for dealing with juveniles, such as juvenile detention centers, and courts.
Legal Issues	Legal issue or issue of law is a legal question which is the foundation of a case, and requires a court's decision. It can also refer to a point on which the evidence is undisputed, the outcome of which depends on the court's interpretation of the law.
Life Skills	Life skills are abilities for adaptive and positive behavior that enable humans to deal effectively with the demands and challenges of life e.g. tying your shoe laces, swimming, driving a car and using a computer are, for most people, useful life skills.
Loss & Grief,	The reaction to learning about the terminal illness, loss, or death of a cherished loved one.
Parent/Child Relationship	Often considered to be the most enduring and significant relationship in one's life. There are different types of parent-child relationships and how they impact on the development of the child.
A Child	A person below the age of 18 years as per the Children Act, Cap 59.
Child Abuse	Acts which cause physical, psychological or sexual harm to children or those which deny them the basic necessities of life.
Child Labour	Work by a child that is harmful to their health, education, mental, physical or moral development.
Child Marriage	Marriage before the legal age of 18 years.
Child Protection	Embodiment of series of components (e.g. Laws, policies, regulations, services, capacities, monitoring, and oversight) organized around the goal of preventing and responding to risks faced by children such as abuse, abandonment, exploitation, and neglect

Community

A group of people either living in a geographical area or who share common interests and/or organized in a social structure that exhibits some awareness of common identity

Community dialogue

A bottom-up approach to community development used by the community to identify issues, agree on priorities to be incorporated in their community plans and solve/address them using available resources within the community. This tool involves networking amongst stakeholders such as faith-based organizations, women and youth groups and sector ministries.
